

Cut-Out Sheet for Pie Graphs, Fractions, Clocks and Compass

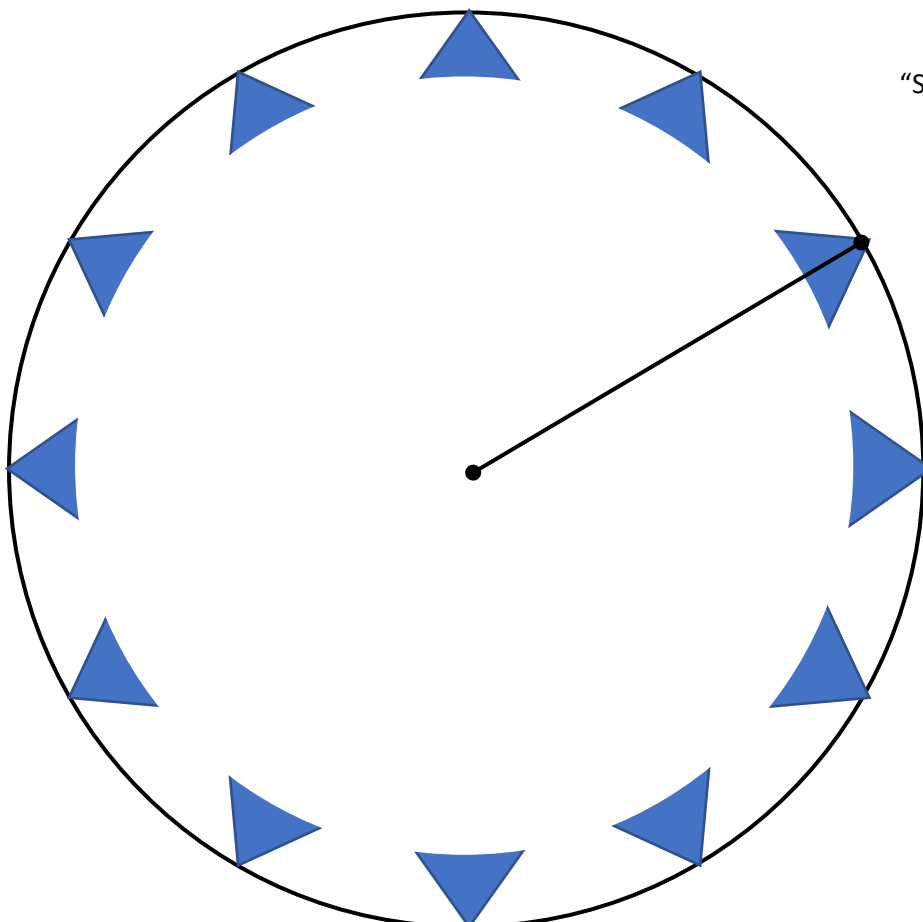

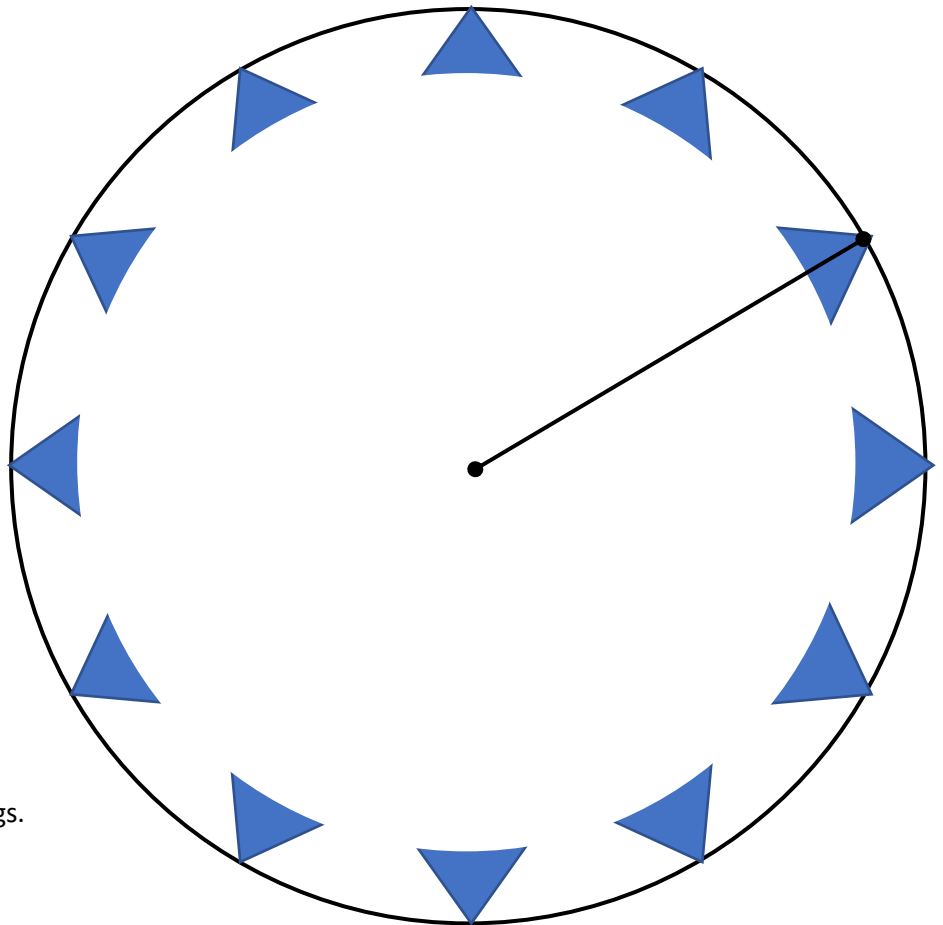

Place a coloured sheet of paper under this one. Through both sheets, cut the circle and the line.

Slot a plain circle and a coloured circle together.

Their centres will be together.

Keep one circle fixed and rotate the other circle.

This machine can be used to make pie charts, fractions, hands of a clock, angles and compass bearings.

“Show me the coloured part making one-quarter. What does it show on the other side?”

“Show me two-thirds.”

“Show me 2 o’clock.”

“Show me 135 degrees.”

“What else can you show me?”
